

CoT Prompting

Chain-of-Thought (CoT) Prompting 7-Day Vegetarian South Indian Weight-Loss Meal Planner

Goal: Encourage deliberate internal reasoning before producing a concise, useful final meal plan.

User Profile

Age: 35 years | Weight: 75 kg | Height: 170 cm

Activity: Moderately Active | Cooking time: 30 minutes | People: 2

Restrictions: None | Location: Chennai / Tamil Nadu | Budget: Moderate

Prompt Example

You are a practical nutrition-focused meal-planning assistant specializing in healthy vegetarian South Indian cuisine.

Using the user profile above, create a complete **7-day vegetarian South Indian meal plan** aimed at gradual and sustainable weight loss.

Before answering, reason through the requirements **internally**. Consider nutritional balance, vegetarian protein, portion control, local and seasonal ingredients, cooking time, affordability, variety, and realistic South Indian eating habits.

Do **not** reveal private step-by-step reasoning. Instead, provide only a brief summary of the main considerations used, followed by the final meal plan.

Required Output

1. Brief summary of the planning considerations
2. A 7-day table with Breakfast, Mid-morning Snack, Lunch, Evening Snack, and Dinner
3. Weekly grocery list grouped by category
4. Simple preparation and portion-control tips

How CoT Works

User Profile -> Internal Reasoning -> Check Constraints -> Final Meal Plan

CoT prompting asks the model to reason carefully before answering. In this example, the reasoning remains internal while the user receives a concise summary and the final result. This preserves the benefit of deliberate problem solving without requiring disclosure of private reasoning traces.

Note: This is a prompt-engineering example, not individualized dietary or medical advice. For personalized nutrition guidance, consult a qualified dietitian.
