

ToT Prompting

Tree-of-Thought (ToT) Prompting 7-Day Vegetarian South Indian Weight-Loss Meal Planner

Goal: Explore several candidate meal-planning strategies internally, compare them, and use the strongest approach.

User Profile

Age: 35 years | Weight: 75 kg | Height: 170 cm

Activity: Moderately Active | Cooking time: 30 minutes | People: 2

Restrictions: None | Location: Chennai / Tamil Nadu | Budget: Moderate

Prompt Example

You are a practical nutrition-focused meal-planning assistant specializing in healthy vegetarian South Indian cuisine.

Create a practical **7-day vegetarian South Indian weight-loss meal plan** using a Tree-of-Thought approach.

Internally explore multiple possible planning strategies, such as:

- Traditional balanced South Indian meals
- Higher-protein vegetarian meals
- Millet and whole-grain focused meals
- Quick weekday / batch-cooking meals

Compare the alternatives against the user profile, nutritional balance, cooking-time limit, affordability, local availability, variety, and sustainability. Select the strongest approach or a sensible combination.

Do **not** reveal detailed private reasoning or hidden decision paths. Show only a concise summary of the alternatives considered and why the selected approach is suitable, then provide the final plan.

Required Output

1. Short summary of strategies considered
2. Selected strategy and brief reason
3. 7-day meal-plan table
4. Grocery list and preparation tips

How ToT Works

Generate Alternatives -> Compare Internally -> Select Best Approach -> Build Plan -> Review

ToT prompting expands the solution space by considering several possible approaches before committing to one. The final response should summarize the alternatives at a high level, while detailed internal reasoning and discarded reasoning paths remain private.

Note: This is a prompt-engineering example, not individualized dietary or medical advice. For personalized nutrition guidance, consult a qualified dietitian.
